Product Description

Description of Ramming Mass Manufacturer Supply High-quality Dry Ramming Mass For Lining induction furnace:

Our Product Introduction

Acidic Dry Ramming Mass

Acidic dry ramming mass exhibits a high α -phosphor quartz conversion rate after the initial heat of kiln firing, requiring a shorter firing time. It offers outstanding volume stability, exceptional thermal shock resistance, and maintains high strength even at elevated temperatures.

Neutral Dry Ramming Mass

Neutral dry ramming mass is known for its ease of application, quick hardening at room temperature, and excellent strength retention at high temperatures. It also features low thermal expansion and shrinkage, along with strong resistance to solution corrosion.

Alkaline Dry Ramming Mass

Alkaline dry ramming mass provides superior volume stability at high temperatures, along with excellent resistance to erosion and abrasion. Its thermal shock resistance is robust, and it has high refractoriness under load, making it a durable choice for demanding conditions.
