Product Description

Product Description of High Quality Refractory Brick Manufacturer Provide Curved Round Fire Clay Bricks
Clay refractory bricks refer to the clay products of aluminum silicate materials with Al_2O_3 content of 30%~40%. The refractoriness is up to 1690~1730 . Fireclay Bricks are produced with the kaolinite ($Al_2O_3 \cdot 2SiO_2 \cdot 2H_2O$) as the main mineral composition and 6~7% impurities (potassium, sodium, calcium, titanium and ferrous oxide).

Fireclay Bricks belong to faintly acid refractory product that can resist acid slag and gas erosion, but has low resistance to alkaline substance.
