Product Description

Product Description of Manufacturer Prices Fused α - β Corundum Bricks High Quality Furnace Refractory Brick For Hot Sale

Fused α -corundum brick is composed of about 50% of α -corundum and β -corundum. The interlacing of the two crystals forms a very dense structure and has excellent alkali resistance. Its corrosion resistance to molten glass rivals AZS brick at temperatures below 1350°C. Because it contains almost no impurities such as Fe_2O_3 , TiO_2 , the matrix glass phase is very small. It has excellent characteristics that foreign matter such as bubbles is rarely generated when it comes into contact with molten glass liquid, so that it does not contaminate the molten glass. Therefore, it is most suitable for wall of working pool, pavement, feed channel and passage of high-grade glass kiln.
